

To Bag Or Not To Bag ... *That is the question.*

Protecting consumable items like food, feed and medicine is part of every fumigation with Vikane* gas fumigant. However, from time to time questions arise about which items need to be double-bagged in Nylofume* bags, and which items can remain in the structure unbagged during the fumigation. Here are some examples to guide you as you prepare your home for fumigation.

Bag these...

Pretzels and other foods packaged in plastic bags need to be bagged or removed.

Animal feed, like human food, needs to be bagged or removed.

Foods packaged in cardboard boxes, like cereal, need to be bagged or removed because the interior plastic bag may not be airtight.

Spices without their original manufacturer's airtight seal intact must be bagged or removed.

Eggs must be bagged or removed from the structure.

Aspirin and other similar ingestible medicines need to be bagged or removed.

Cottage cheese should be bagged or removed because resealable containers, including Tupperware and other storage containers, do not form airtight seals.

Ice cubes should be discarded before the fumigation and the icemaker turned off.

No need to bag these...

Unopened 2-liter plastic bottles with manufacturer's airtight seal intact can remain unbagged. Shake 2-liter bottles to confirm that the airtight seal is still intact.

Canned products like soup may remain unbagged because unopened metal cans provide an airtight seal.

When in doubt, take it out.

If there's any question as to the seal on an item, the best approach is to take it out of the structure to be fumigated or double bag it.

If you have any questions about what items should be bagged, please contact your local professional pest control company at _____.
